SEQUENCE

SELECTION

ITERATION

What is loop or iteration?

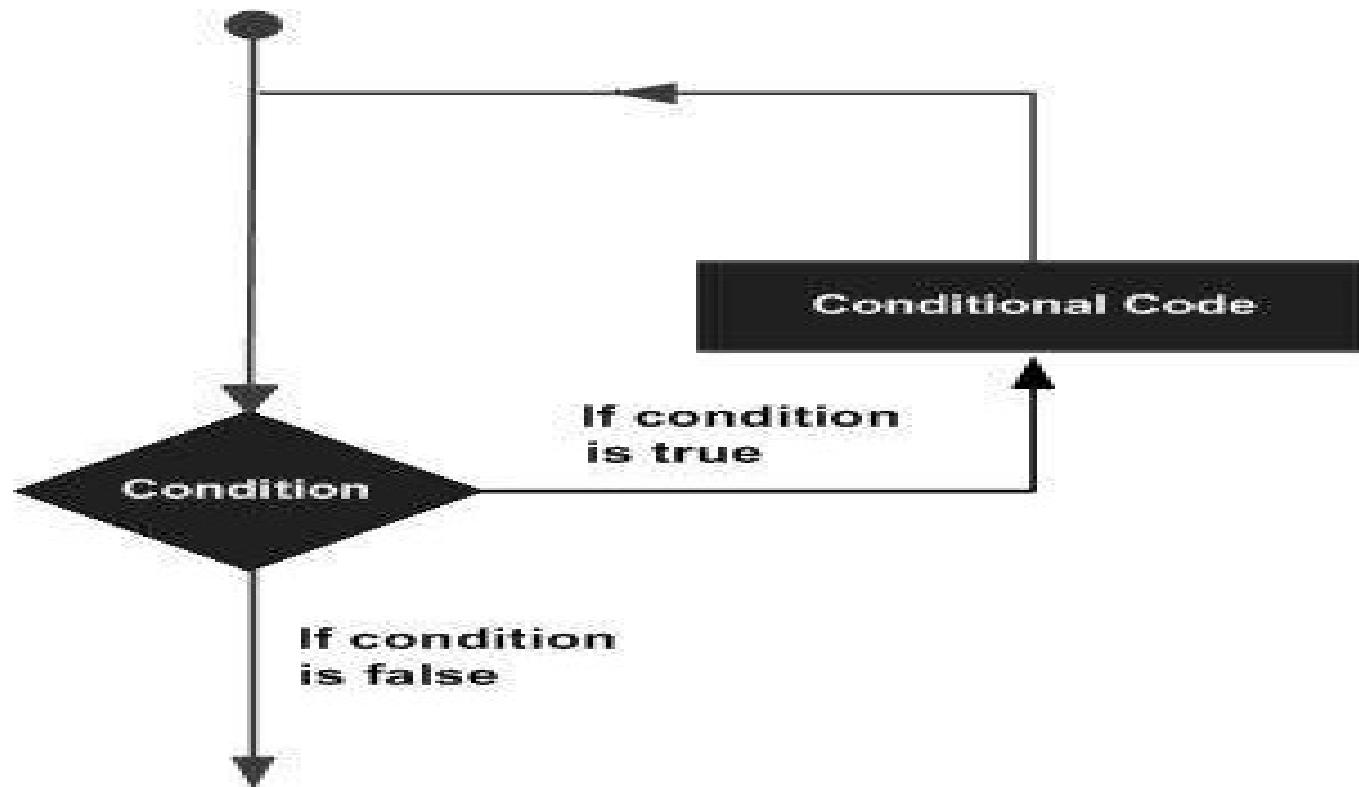

Loops can execute a block of code number of times until a certain condition is met.

OR

The iteration statement allows instructions to be executed until a certain condition is to be fulfilled.

The iteration statements are also called as loops or Looping statements.

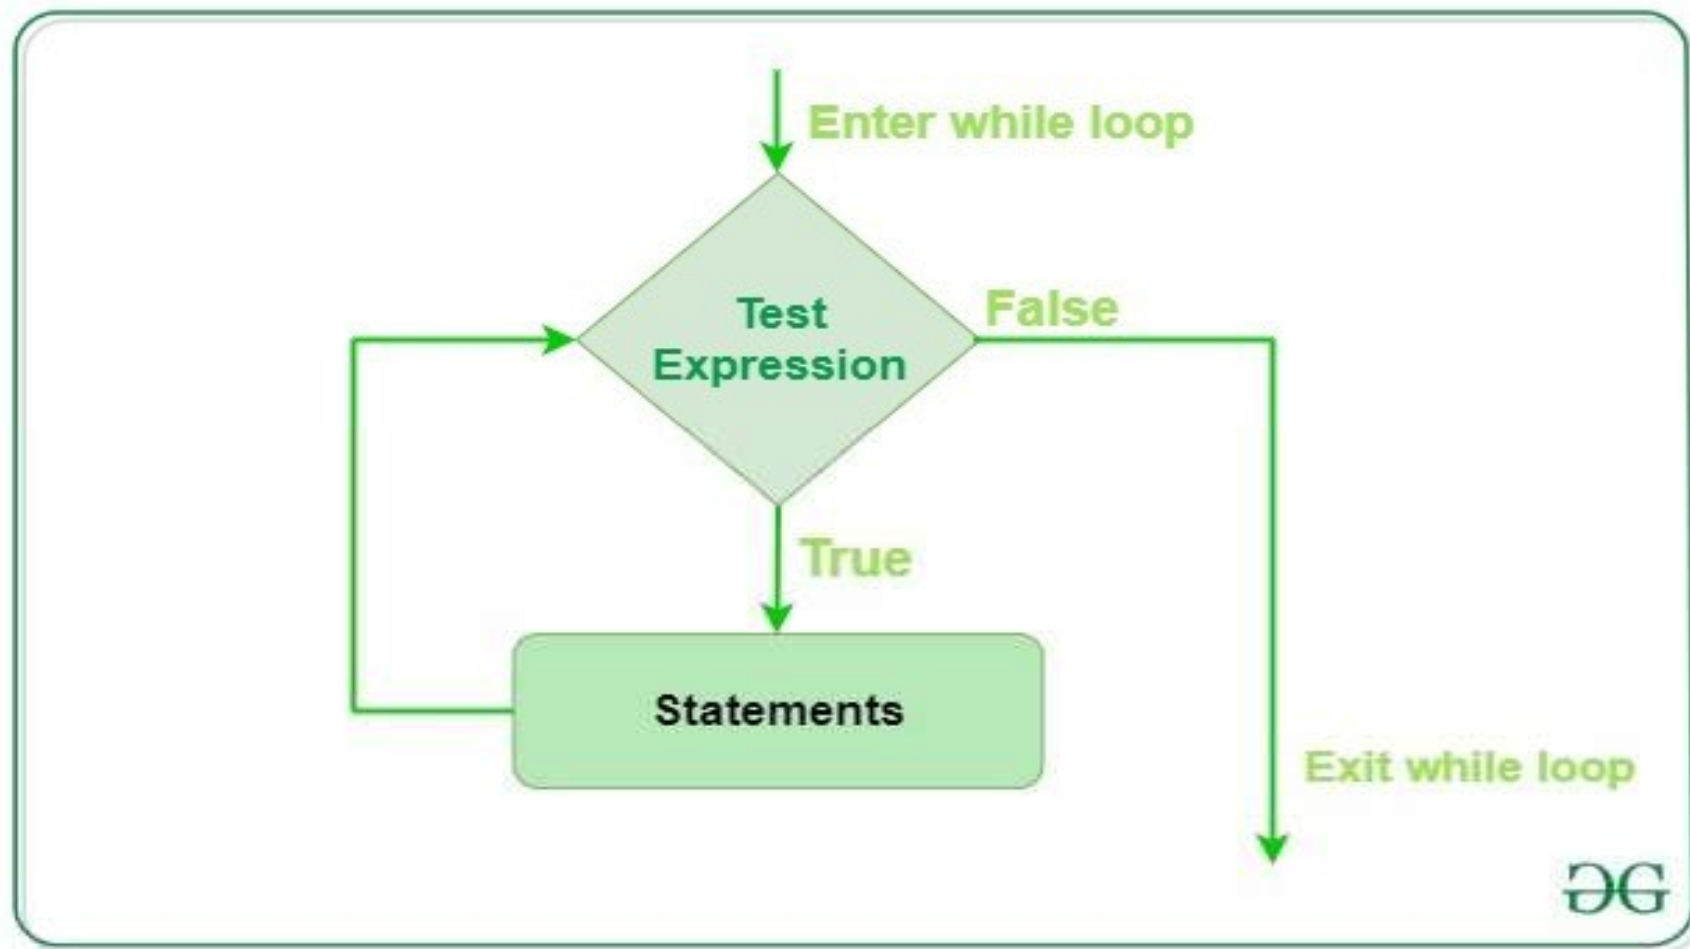

- A loop statement allows us to execute a statement or group of statements multiple times.

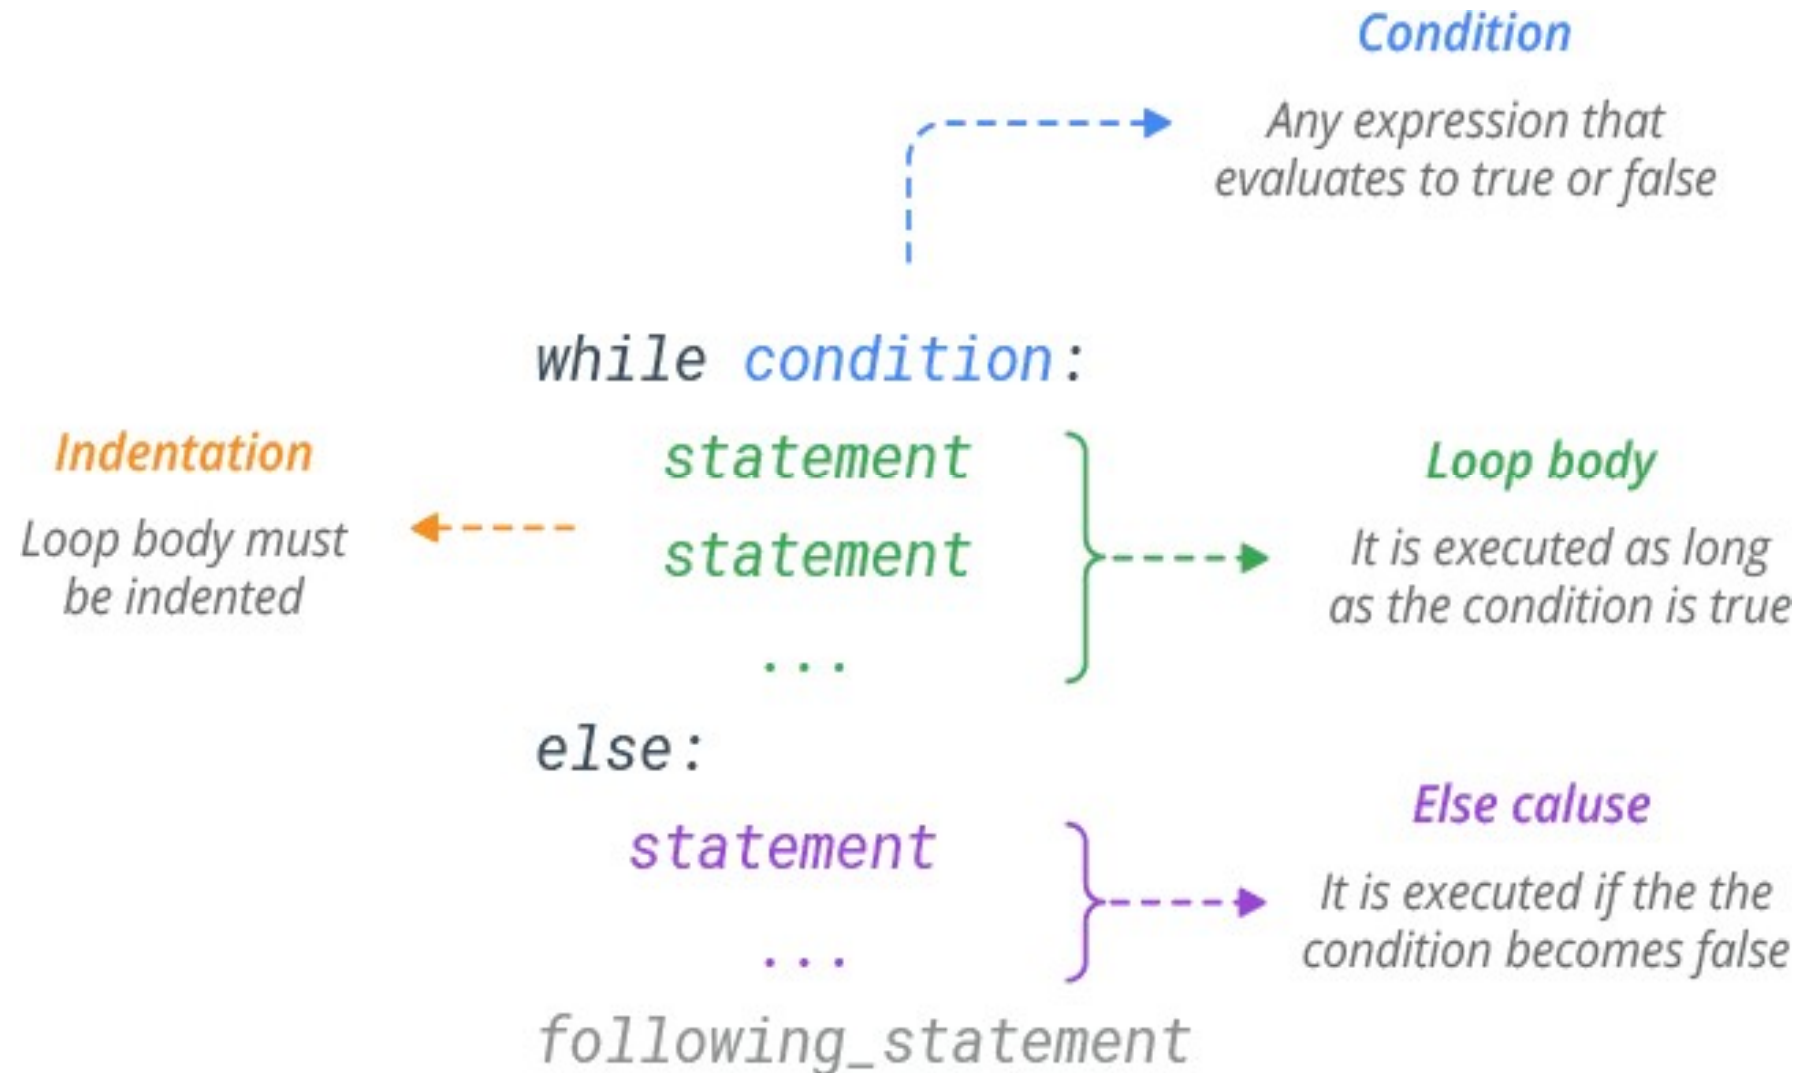

Types of Loop

While loop

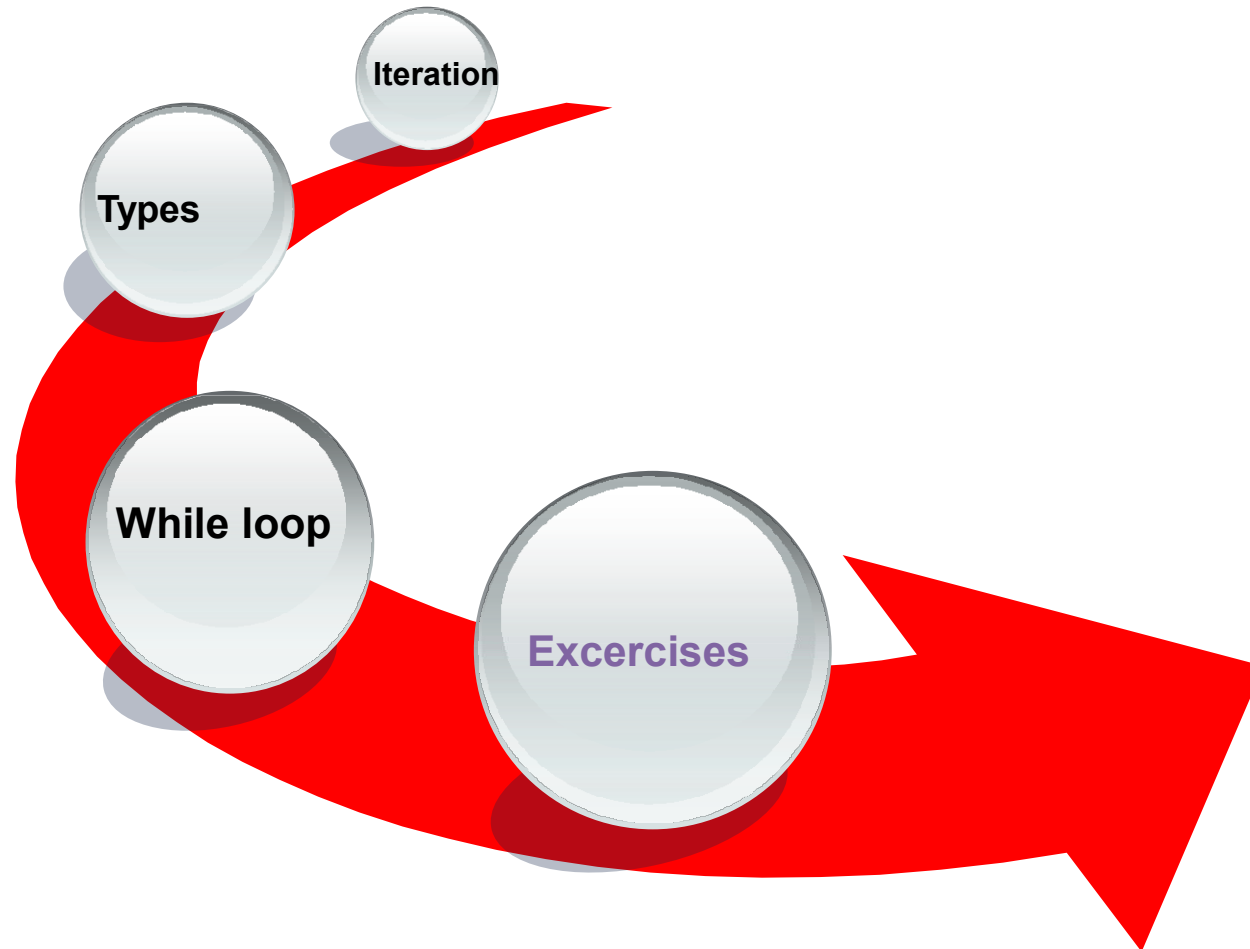

While loop

Flow Control - while loop

- Repeat statements again and again
- Structure
 - while keyword followed by a boolean expression
 - followed by a colon
 - followed by an indented block of code on next line
- “while” loops work as follows:
 - Evaluate a Boolean expression.
 - If it is False, skip the block of statements associated with the while loop and condition the program as normal
 - If it is True n Execute a series of statements.
 - At the end of the statement block re-evaluate the condition
 - If it is True, repeat the block of statements
 - If it is False, skip the block of statements associated with the while loop and continue the program as normal
